

User Persona

Tech-Savvy College Student:

Name: Juile Amsterdam,

Age: 20,

Occupation: Full-time Student,

Device: iPhone 15 Pro

About

Julie is busy with schoolwork, extracurricular activities, and a part-time job.

She uses her phone to watch TikTok videos. She also uses her phone to communicate with friends and family. It would be great if she could use her phone to help with her busy schedule.

Goals & Motivations

- **Get more organized:** She wants to spend more time with family and friends.
- **Improve her study habits:** To remind her to complete assignments and prepare for tests.
- **Show up to class on time:** She needs a reminder 30 minutes before class starts.

Pain Points & Frustrations

- **Bad application design:** She currently has a calendar application that has many menus and submenus. The interface is not well organized.
- **Missed reminders:** The complicated interface of her existing application caused her to miss some reminders.
- **Use with one hand:** Her current application requires two hands to navigate all the features.

Key Features Requirements

- **Photo Capture:** Complex to-do apps with too many submenus and priority matrices take too long to use.
- **Location Services with Map View:** Standard banner notifications get buried under work emails and social media pings.
